Project Description

An easy to handle bushing infusion process for the use as an alternative rotorblade root or blade-to-blade connection for wind turbines

Project Objectives

- Bringing the laboratory-ready process and product to the market

Project idea: An alternative bushing concept

Call area: No. 3

Our know-how...

- We are an engineering service provider specializing in wind energy, offering services in the field of load and structural analysis. Our many years of experience with fiber composite components helps us to understand the needs of manufacturers and to optimize the force transfer in connection concepts.

We are looking for...

... an industrial partner who will work with us to further develop the concept and bring it to market maturity.
