Project Description

The whole Industry experienced a shift this year with the COVID-19 pandemic. Supply chains were disrupted, production lines were halted, and budgets were cut. We want to deploy our distributed manufacturing solution to digitalize and shorten the supply chain across the EU industry, impacting in the reduction of CO2 emissions

Project Objectives

- Create resilient supply chains for European companies.
- Development toward decentralised production.

Project idea: Digital supply chain

Call area: Industry for a clean and circular economy

Our know-how...

- OEM Automated Additive Manufacturing machinery
- Cloud manufacturing software for AM.
- Metal materials for AM (mainly filament based)
- Polymers for AM (mainly filament based)
- Debinding and sintering postprocessing

We are looking for...

- Power users cloud manufacturing platform
- Power Users Metal materials
- Materials analysis and development
